# The zeta function of $\mathfrak{g}_{6,8}$ counting ideals 

## 1 Presentation

$\mathfrak{g}_{6,8}$ has presentation

$$
\left\langle x_{1}, x_{2}, x_{3}, x_{4}, x_{5}, x_{6} \mid\left[x_{1}, x_{2}\right]=x_{3}+x_{5},\left[x_{1}, x_{3}\right]=x_{4},\left[x_{2}, x_{5}\right]=x_{6}\right\rangle
$$

$\mathfrak{g}_{6,8}$ has nilpotency class 3 .

## 2 The local zeta function

The local zeta function was first calculated by Luke Woodward. It is

$$
\begin{aligned}
\zeta_{\mathfrak{g}, 8, p}^{\triangleleft}(s)= & \zeta_{p}(s) \zeta_{p}(s-1) \zeta_{p}(s-2) \zeta_{p}(3 s-3) \zeta_{p}(4 s-3) \zeta_{p}(5 s-5) \zeta_{p}(6 s-6) \\
& \times \zeta_{p}(7 s-7) \zeta_{p}(8 s-8) W\left(p, p^{-s}\right)
\end{aligned}
$$

where $W(X, Y)$ is

$$
\begin{aligned}
& 1+X^{3} Y^{4}-2 X^{3} Y^{5}+X^{4} Y^{5}-2 X^{6} Y^{7}+X^{7} Y^{7}+X^{6} Y^{8}-2 X^{7} Y^{8}-X^{7} Y^{9} \\
& -X^{10} Y^{11}+X^{9} Y^{12}-X^{11} Y^{12}+X^{10} Y^{13}+X^{13} Y^{15}+2 X^{13} Y^{16}-X^{14} Y^{16} \\
& -X^{13} Y^{17}+2 X^{14} Y^{17}-X^{16} Y^{19}+2 X^{17} Y^{19}-X^{17} Y^{20}-X^{20} Y^{24}
\end{aligned}
$$

$\zeta_{\mathfrak{g}_{6,8}}^{\triangleleft}(s)$ is uniform.

## 3 Functional equation

The local zeta function satisfies the functional equation

$$
\left.\zeta_{\mathfrak{g} 6,8, p}^{\triangleleft}(s)\right|_{p \rightarrow p^{-1}}=p^{15-12 s} \zeta_{\mathfrak{g}_{6,8}, p}^{\triangleleft}(s)
$$

## 4 Abscissa of convergence and order of pole

The abscissa of convergence of $\zeta_{\mathfrak{g}_{6,8}}^{\triangleleft}(s)$ is 3 , with a simple pole at $s=3$.

## 5 Ghost zeta function

The ghost zeta function is the product over all primes of

$$
\begin{aligned}
& \zeta_{p}(s) \zeta_{p}(s-1) \zeta_{p}(s-2) \zeta_{p}(3 s-3) \zeta_{p}(4 s-3) \zeta_{p}(5 s-5) \zeta_{p}(6 s-6) \zeta_{p}(7 s-7) \\
& \quad \times \zeta_{p}(8 s-8) W_{1}\left(p, p^{-s}\right) W_{2}\left(p, p^{-s}\right) W_{3}\left(p, p^{-s}\right)
\end{aligned}
$$

where

$$
\begin{aligned}
& W_{1}(X, Y)=1+X^{7} Y^{7}, \\
& W_{2}(X, Y)=1+2 X^{10} Y^{12}, \\
& W_{3}(X, Y)=2-X^{3} Y^{5} .
\end{aligned}
$$

The ghost is unfriendly.

## 6 Natural boundary

$\zeta_{\mathfrak{g}_{6,8}}^{\triangleleft}(s)$ has a natural boundary at $\Re(s)=1$, and is of type II.
