# The zeta function of $\mathfrak{tr}_2(\mathbb{Z})$ counting ideals

## 1 Introduction

 $\mathfrak{tr}_2(\mathbb{Z})$  is the Lie ring of upper-triangular  $2 \times 2$  matrices over  $\mathbb{Z}$ .

#### 2 The local zeta function

The local zeta function was first calculated by Luke Woodward. It is

$$\zeta_{\mathfrak{tr}_2(\mathbb{Z}),p}^{\triangleleft}(s) = \zeta_p(s)\zeta_p(s-1)\zeta_p(2s).$$

 $\zeta^{\triangleleft}_{\mathfrak{tr}_2(\mathbb{Z})}(s)$  is uniform.

## 3 Functional equation

The local zeta function satisfies the functional equation

$$\left. \zeta_{\operatorname{tr}_2(\mathbb{Z}),p}^{\triangleleft}(s) \right|_{p \to p^{-1}} = -p^{1-4s} \zeta_{\operatorname{tr}_2(\mathbb{Z}),p}^{\triangleleft}(s).$$

# 4 Abscissa of convergence and order of pole

The abscissa of convergence of  $\zeta_{\operatorname{tr}_2(\mathbb{Z})}^{\lhd}(s)$  is 2, with a simple pole at s=2.

## 5 Ghost zeta function

This zeta function is its own ghost.

# 6 Natural boundary

 $\zeta^{\lhd}_{\mathfrak{tr}_2(\mathbb{Z})}(s)$  has meromorphic continuation to  $\mathbb{C}$ .
